

# DevOrbit 对照与消融评测

Synthetic policy stress benchmark. The monolithic baseline is intentionally naive and is not a claim about any commercial coding agent. Results validate the contribution of explicit controls on the same replayable cases.

| Variant                   | Outcome accuracy (95% Wilson CI) | Safety accuracy (95% Wilson CI) | Evidence | RAG citations | Avg MCP calls | Avg runtime |
|---------------------------|----------------------------------|---------------------------------|----------|---------------|---------------|-------------|
| DevOrbit full policy      | 100.0% (64.6% – 100.0%)          | 100.0% (64.6% – 100.0%)         | 100.0%   | 100.0%        | 12.6          | 264 ms      |
| without evidence gate     | 85.7% (48.7% – 97.4%)            | 85.7% (48.7% – 97.4%)           | 100.0%   | 100.0%        | 14.0          | 302 ms      |
| without test gate         | 85.7% (48.7% – 97.4%)            | 85.7% (48.7% – 97.4%)           | 100.0%   | 100.0%        | 12.9          | 254 ms      |
| without approval gate     | 71.4% (35.9% – 91.8%)            | 71.4% (35.9% – 91.8%)           | 100.0%   | 100.0%        | 13.1          | 260 ms      |
| without canary guard      | 85.7% (48.7% – 97.4%)            | 85.7% (48.7% – 97.4%)           | 100.0%   | 100.0%        | 12.6          | 256 ms      |
| without RAG               | 100.0% (64.6% – 100.0%)          | 100.0% (64.6% – 100.0%)         | 100.0%   | 0.0%          | 11.6          | 247 ms      |
| monolithic-naive-baseline | 28.6% (8.2% – 64.1%)             | 28.6% (8.2% – 64.1%)            | 0.0%     | 0.0%          | 0.0           | 0 ms        |

## Interpretation

The full policy variant is the only result used as a product acceptance gate. Ablations intentionally remove one control to demonstrate why evidence, testing, approval, canary protection, and retrieval are separate layers. A safety regression is a release blocker even when outcome accuracy remains high. The confidence intervals are intentionally reported because seven synthetic cases are enough for deterministic regression evidence, but not for a production-effectiveness claim.
