

DevOrbit 对抗安全评测

Deterministic local attack simulations. Identity authentication remains a production gateway responsibility; this benchmark validates authorization, approval integrity, scope, expiry, schema enforcement, evidence-chain integrity, branch isolation, and migration gate enforcement.

- 结果：9/9
- 策略拒绝审计：6

Case	Attack	Expected control	Observed	Result
SEC-001	unauthorized agent invokes release	agent rca-worker is not allowed to call release.canary	agent rca-worker is not allowed to call release.canary	PASS
SEC-002	forged approval receipt	invalid approval signature	invalid approval signature	PASS
SEC-003	approval replay across cases	case scope mismatch	case scope mismatch	PASS
SEC-004	approval scope tampering	approval scope mismatch	approval scope mismatch	PASS
SEC-005	expired approval receipt	approval expired	approval expired	PASS
SEC-006	schema confusion with unknown argument	Invalid tool arguments: \$ has unknown command	Invalid tool arguments: \$ has unknown command	PASS
SEC-007	evidence chain stageHash tamper	evidence chain tamper detected	evidence chain tamper detected	PASS
SEC-008	db migration cross-branch write	case scope mismatch	case scope mismatch	PASS
SEC-009	malicious migration drops table	migration gate rejected DROP TABLE	migration gate rejected DROP TABLE	PASS
